

Bringing Fiber to your neighborhood is as easy as 1-2-3!

1 Show Your Interest

We rely on demand from our interest surveys to determine where we should expand our network.

The more of your neighbors that complete this step, the sooner we can begin engineering a zone to fit your neighborhood!

If you have interested neighbors not located in a current zone, be sure to share the survey! This shows a demand in their area for future expansion!

2 Sign Up for Service

Zones that qualify with enough interest surveys are converted to the sign-up phase. This means that you can sign up for service and our team will begin to engineer your zone.

You will choose your package plan, and sign the contract, while we finalize getting construction permitting.

3 Construction

Our construction team will begin building a fiber network along roadways to reach your home or business, you will see trucks in your area, the network can be built aerially on poles, underground through trenches, or a combination of both.

The exterior cable and network ID box will be installed on your property and a fiber cable will be run to your home, and you'll be able to enjoy fast, reliable, fiber internet!

(844) 752 - 6736
